

Quoril.

The productivity OS for deep work

One native desktop app that unifies tasks, focus tracking, app analytics, and digital wellbeing — offline-first, with real-time cloud sync.

THE PROBLEM

Knowledge workers are drowning in tools — and losing their attention.

4+

Fragmented stack

A to-do app, a timer, a screen-time tracker, and an analytics dashboard — none of them talk to each other.

2h 24m

Lost to distraction

The average knowledge worker burns hours a day context-switching between apps and websites, with no feedback loop.

0

Native visibility

Browser-based task managers can't see what you actually do on your machine, so "productivity" is guesswork.

The result: people plan work in one place, do it in another, and never learn where their time really goes.

THE SOLUTION

Quoril is a single command center for focused work.

A native desktop app that plans your work, runs your focus sessions, watches how you actually spend your time, and closes the loop with analytics — all in one place.

PLAN

Kanban tasks

Backlog → This Week → Today
→ Done, with time estimates & subtasks.

FOCUS

Focus engine

Full-screen mode, floating pill & Pomodoro for deep work.

MEASURE

App analytics

Native window & website tracking, auto-categorized.

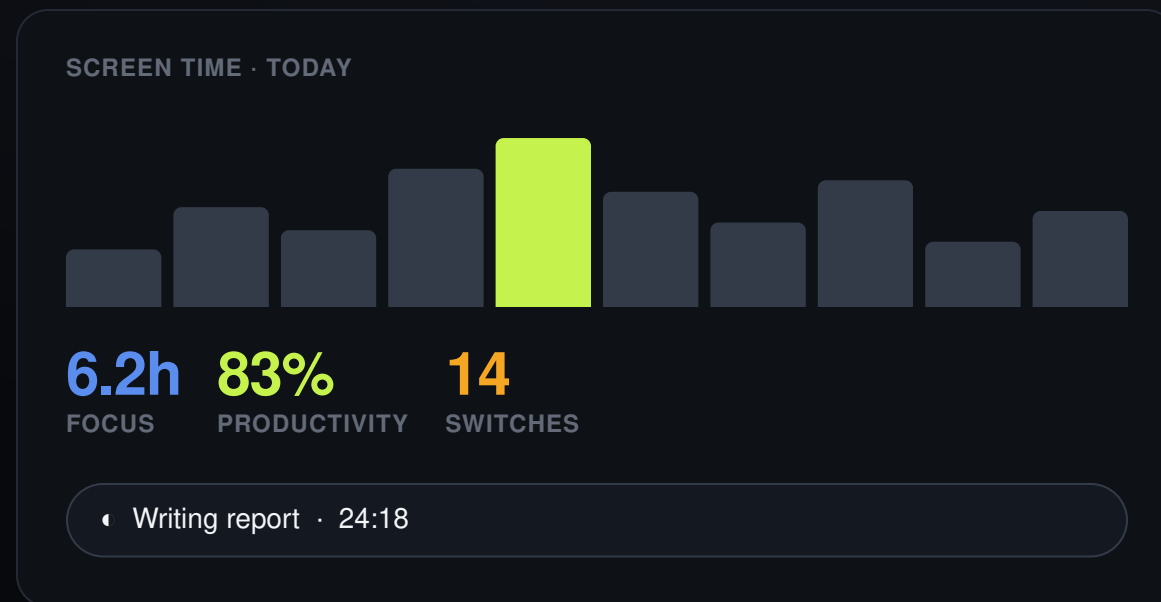

REFLECT

Wellbeing

Screen-time, productivity score & reports that close the loop.

Not another to-do list. An operating system for attention.

- **Offline-first by design.** Every write hits local SQLite instantly; a background engine syncs to the cloud when you're online. Works on a plane, syncs at the gate.
- **Native app tracking.** A background engine reads the active window every few seconds and classifies 20+ app categories and top websites — visibility a web app simply can't have.
- **Per-task context linking.** App usage is tied to the task you're focused on, so you get real "where did this project's time go" reports.
- **Always-on focus pill.** A frameless, glassmorphic widget floats over every app with your task, timer, and subtasks.

WHY NOW

The attention economy created the problem. The tooling is finally ready to solve it.

Remote & hybrid is permanent

Work moved onto the desktop and stayed there. Individuals — not IT — now buy the tools that structure their day.

Digital wellbeing went mainstream

Screen-time and focus features are now consumer expectations, but they live siloed on phones — not where deep work happens.

Local-first tech matured

Electron, SQLite, and real-time sync (Supabase) make a fast, private, offline-first desktop app shippable by a small team.

Privacy is a tailwind: Quoril keeps your raw activity data on your machine — a sharp contrast to cloud trackers, and increasingly a purchase driver.

A large, expanding wedge into productivity software.

TAM · GLOBAL PRODUCTIVITY SOFTWARE

\$115B

Task, focus & collaboration tools, growing ~13% CAGR.

SAM · DESKTOP FOCUS & TIME-TRACKING

\$9B

Individuals & small teams paying for focus / analytics apps.

SOM · 3-YR OBTAINABLE

\$40M

~350K Pro subscribers at \$9–12/mo.

- Bottoms-up entry: sell to the individual knowledge worker first, expand into teams.
- Hundreds of millions of desktop knowledge workers globally are the top of the funnel.
- Adjacent expansion: team dashboards, manager reports, and API/integrations unlock ACV growth.

Figures are directional estimates for discussion, triangulated from public productivity-software market sizing; not audited.

Freemium SaaS — high-margin, recurring, individual-led.

Free

\$0

- Core tasks, focus engine & local tracking
- Single device, on-device data
- The habit-forming daily driver → top of funnel

Pro

\$9/
mo

- Real-time cloud sync across all devices
- Full reports, trends & productivity scoring
- Advanced themes, history & priority support

FUTURE SEAT EXPANSION

Product-led growth, powered by the deep-work community.

01 · ACQUIRE

Content & community

SEO and content on focus, Pomodoro & digital minimalism; launch on Product Hunt, Reddit & X where the deep-work audience lives.

02 · CONVERT

Free app as the hook

A genuinely useful free tier builds the daily habit; sync, cross-device & analytics are the natural upgrade to Pro.

03 · EXPAND

Individuals → teams

Bottom-up adoption seeds companies; team dashboards & manager reports unlock per-seat revenue.

The waitlist is already compounding a launch-day audience — a warm channel before we spend a dollar on paid acquisition.

COMPETITION

Everyone owns one piece. Quoril owns the whole loop.

CAPABILITY	QUORIL	TODOIST / THINGS	RESCUETIME	RIZE / TOGGL
Kanban task management	●	●	—	—
Deep-work focus engine + Pomodoro	●	—	—	●
Native app & website tracking	●	—	●	●
Per-task time attribution	●	—	—	—
Offline-first, on-device data	●	—	—	—
All-in-one command center	●	—	—	—

Point tools force a stitched-together stack. Quoril's moat is integration — planning, doing, and measuring in one native, private app.

Product is built. We're at the starting line, not the drawing board.

FEATURES ACROSS 4 PILLARS

Live

WAITLIST & LANDING SITE

Already de-risked

- Full offline-first sync engine working end-to-end
- Native tracking live on Windows & macOS (with permissions UX)
- Auth, cloud DB & four theme systems complete

Next 6 months

- Public launch & convert the waitlist
- Instrument activation & free→Pro conversion
- Prove retention on the daily-driver loop

From personal command center to team intelligence.

NOW · H2 2026

Launch & monetize

- Public release
- Pro subscriptions live
- Activation analytics

2027

Deepen the loop

- AI focus insights & nudges
- Calendar & integrations
- Mobile companion

2028

Go to teams

- Team dashboards
- Manager reports
- API & enterprise

Each phase raises ACV: from a \$9 individual habit, to AI-assisted retention, to per-seat team revenue.

A technical founder who ships.

**Erik
Vale**

FOUNDER & ENGINEER

- Designed and shipped Quoril end-to-end: Electron desktop app, native OS tracking, offline-first SQLite↔Supabase sync, and a polished multi-theme React UI.
- Full-stack breadth across systems (IPC, background engines), product design, and cloud infrastructure — the exact skill set this product demands.
- Capital-efficient: a complete, cross-platform v1.0 built solo before raising.

Seeking to add early design & growth hires post-raise to accelerate launch and go-to-market.

THE ASK

Raising a seed round to launch and prove the loop.

RAISING

\$1.5M

Seed · 18-month runway

USE OF FUNDS

- 45% Engineering & product
- 35% Growth & launch
- 20% Ops & infra

MILESTONES TO SERIES A

- Public launch
- Strong free→Pro conversion
- Proven weekly retention

Let's give deep work an operating system.
